

CALL FOR ABSTRACTS

Conference scope:

The global demand for sustainably produced electrochemical energy storages is at an all-time high and is expected to increase even further. With all the attention devoted to battery technology, the production process of batteries is often neglected. The International Battery Production Conference will bridge this gap.

In cooperation with the VDMA Batterieproduktion, the Battery LabFactory Braunschweig (BLB) established an international exchange and networking platform that addresses the latest developments in the area of battery production - this year with a special focus on cell production.

We invite you to share and discuss your recent results in the area of battery production by contributing a presentation or a poster to the conference sessions! We equally look forward to receiving contributions from industry and academia.

The session topics are:

- (1) Housing, geometrical shapes and cell types
- (2) Module and pack production
- (3) Cell assembly, stacking and electrolyte filling
- (4) Factory design for battery production
- (5) Life Cycle Engineering and management, recycling
- (6) Aging and formation
- (7) Mixing, dispersing and drying
- (8) Calendering
- (9) Production of solid polymer batteries, production of all solid state batteries
- (10) Electrode, cell, module, diagnostics and validation during production
- (11) Safety in production and use
- (12) Module and pack design

You can submit your abstract **until August 10th** via www.battery-production-conference.de/call-for-abstracts/

The abstracts should include title, author(s), affiliation(s) and corresponding author contact information. Please indicate which session topic your abstract is related to and if you want to submit a presentation or a poster!

Please note: the conference language is **English**. Please submit only **English abstracts**.

We are looking forward to meeting you in Braunschweig!

Important Dates:

Deadline for abstract submission: August 10th
